KEY - acid base study guide Acids are chemical compounds that release hydrogen ions (H^+) when placed in water. For example, when hydrogen chloride is placed in water, it releases its hydrogen ions and the solution becomes hydrochloric acid. Bases are chemical compounds that attract hydrogen atoms when they are placed in water. An example of a base is sodium

A Lewis acid is therefore any substance, such as the H^+ ion, that can accept a pair of nonbonding electrons. In other words, a Lewis acid is an electron-pair acceptor. YOU MIGHT ALSO LIKE... Study Guide - Acids and Bases - Arkansas State University An acid and a base can be combined in what is known as a neutralization reaction. In this reaction, the pH will become something between the pH's of the acid and the base. When they are combined, the products are water (from the H^+ and OH^- ions) and an ionic compound known as a salt. Name 3 characteristics that acids and
