This is exactly what you want your own food forest to be like. To achieve a low maintenance abundance of fruit, nuts, berries and herbs you'll want to create a forest-like system where fertility comes from various sources, where you're greatly aided by fungi, where wildlife is your primary pest control, where soil holds water like a sponge, and where you have a high diversity of plants.

When food forests mature, they create shade and make their own mulch when trees drop old leaves, so there tends to be less weeding. However, newly planted food forests need some weeding and mulching, occasional fertilization and pest management. Fruit Trees. Avocado Plant this large tree at least 15-20 ft from other large trees. Harvest fall and winter.
